ETS Awarded PPM Monitors for Jack & St. Malo Project

Chevron/Mustang Engineering has award Enviro-Tech Systems the supply of all onsite process water effluent monitoring for the platform. Enviro-Tech Systems latest monitoring technology includes the use of the Advanced Sensors continuous online ppm monitor to provide leading indicators to platform operators to help prevent overboard discharges exceeding the government regulation. The Smart Water Discharge Technology developed by Enviro-Tech Systems in cooperation with Advanced Sensors of Ireland is presently being used on several Gulf of Mexico platforms and other locations worldwide. In addition to preventing discharge exceedence and spills it provides the platform operator valuable information on his day to day activities; operating the platform within specified equipment parameters and allowing for maximum optimization of the process.
