ETS Introduced First Advanced Sensors PPM Monitor Systems to the Gulf of Mexico

Enviro-Tech Systems recently completed the first Advanced Sensors PPM Monitor installation for a Major Oil Company in the Gulf of Mexico. This installation included two (2) main operations: 1. to replace the existing produced water treatment equipment with Best Available technology (BAT) removing the old mechanical flotation and replacing it with the Enviro-Cell™ for optimum operation and efficiency and 2. to add two (2) Advanced Sensors Continuous Online PPM monitors to provide leading indicators to field operators of normal operation or impending change in equipment performance. This revolutionary method was developed by Enviro-Tech Systems to prevent upsets and spills of hydrocarbon in the Gulf of Mexico. After nearly one year of operation the system has closely been monitored both by field personnel and management with the consensus being that it has been a success venture, to the level that it is the eventual belief that all platform operations should and will have this process installed.
